Note: Date of submission is 01/10/2019

Attach the given sheet in your portfolio.

Perform the experiment and write the conclusion.

Experiment: Browning of apples when exposed to air

<u>Objective:</u> This experiment explains why some vegetables and fruits (such as apples) turn brown when you cut them.

Things required

- 1. An apple
- 2. A lemon cut into half
- 3. Water
- 4. 3 bowls
- 5. A knife

Process:

- 1. Peel the apple and cut it into 3 slices.
- 2. Place a slice into the bowl.
- 3. Pour water into the first bowl.
- 4. Squeeze the juice of half a lemon in the second bowl.
- 5. Leave the third bowl as it is with the apple slice.
- 6. Observe the apple slices after 4-5 hours.

<u>Conclusion</u> :	What do you notice?
